SUMMARY

Seasoned software engineer / manager with experience in IoT, Banking and Finance, Oil Transport, Bio Pharma. Deep understanding of the software development lifecycle, having successfully managed complex projects from concept to production. Ability to effectively communicate and collaborate with cross-functional teams and deliver high-quality products on time and on budget. Servant leadership style.

Sr. Principal Software Engineer / Manager – [JLG Industries](#) 2024 – Present

- Re-designed and implemented Site Networks feature: DB re-design, logic improvements, testing.
- Coordinate system development and execution in a team environment.
- Tools used: Java, Quarkus, SQL Server, ADX, KeyVault, Git, IoTHub, etc.
- Plan, develop, and implement improvements and changes to existing architecture and applications.
- Prepare technical solution design proposals and presentations.
- Provide direction and technical counsel to other software engineers.
- Research, study, and propose use of new software/technologies to be used in the development of new and improved products and features.
- Evaluate IoT products and practices and identify software system designs and solutions.

Sr. Software Engineer 2 / Manager – [Cognizant](#) 2021 – 2023

- Led engineering teams with large enterprise client engagements: EY, FIS and Fiserv. Project roles as Solutions Architect, Tech Lead, Architect, SRE.
- Tools used: C#, OOP, SOLID, CI/CD, REST APIs, .NET Core, .NET Framework, SQL Server, PostgreSQL, AWS, Azure, DevOps, Git, React, JavaScript, Node, Kafka.
- Developed dashboard in C# ASP.NET MVC for Fiserv's client services department. Performance optimization via async calls using React and Node on the front end and SP optimization in the back end: improved from 10+ secs to <1 sec load time.
- FIS Payment gateway project for credit card authentication in e-commerce transactions. Solution in AWS Lambda. Frontend in React and Node. TDD for both backend and frontend.

Software Developer – [ARL Bio Pharma](#) 2014 – 2020

- Developed LIMS system from scratch and maintained legacy production system.
- Full sample life cycle from accessioning to reports on web portal
- Highly sophisticated business logic for lab tests: Sterility, HPLC, Assays, etc.
- Led cross functional team of Laboratory SMEs to architect new system.

Software Delivery Engineer – [Globys](#) 2010 – 2011

- Developed big data transformation tools for telecommunications clients (i.e. Tesltra, Vodafone).
- Close collaboration with QA team for defect resolution

Software Engineer – [AccessVia](#) 2006 – 2009

- Implemented key features for main product used in printing retail store signs.
- Tools included: C#, SQL Server, Oracle, MS Access, Visual Basic.

Programmer Analyst – [Simons Petroleum](#) 2001 – 2006

- Completed driver scheduling application for truck load delivery scheduling: VB, SQL Server
- Implemented key reporting features for www.simonspetroleum.com in ASP Classic

EDUCATION**Bachelor of Science in Computer Science**

University of Central Oklahoma, www.uco.edu Edmond, OK

Internships at Seagate, Cerner and Avant Digital

MBA

University of Phoenix, www.phoenix.edu Oklahoma City, OK

While working full-time

Associate Degree in Applied Science

Rose State College, www.rose.edu Midwest City, OK

Microsoft National Minority Scholarship

Software Engineering

Construx Software, www.construx.edu Seattle, WA

Courses: OOD, Developer Bootcamp, Requirements, Software Estimation In-Depth.

AWS Solutions Architect Bootcamp (2024)

ASM Educational Center, www.asmed.com Rockville, MD

CloudFormation, Networking (VPCs, Subnets, AZs), EC2, ELB, Lambda, RDS, DynamoDB, S3, IAM, etc.

LANGUAGES

Spanish / Portuguese
